

# International Collaboration : Aceh Eq 2016

# International Collaboration : Aceh Eq 2016

# Conclusion

---

- Research plays important rule in earthquake risk reduction in Indonesia (number of researcher and publication).
- We have identified more than 200 inland active-faults and 16 subduction-zone segments.  
More research need to be done (case of 2016 Aceh-eq).
- Updating probabilistic seismic hazard analysis map of Indonesia (2017) with building code.
